

MATH AND SCIENCE

The mission of the Department of Mathematics and Science is threefold. The first goal is to acquaint students with scientific methodologies, critical thinking, and the history of scientific thought. The second is to address the interface between science and art, architecture, and design, whether it is through the physics of light, the chemistry of color, the biology of form, or the mathematics of symmetry. The third is to educate students so that they can respond intelligently and critically to today's new developments in science and technology and make informed decisions regarding current scientific matters that affect public policy issues and ethics.
